Simin Shoeibi

Full-Stack Web Developer & AI System Engineer | Scaling Platforms for 60K+ Users & Creator of Top-10 VS Code Extension (630K+ Installs) | React · Node.js · TypeScript · AI Integration
Barcelona, Catalonia, Spain

Summary

Based in Barcelona, Spain, with full EU work authorization, open to full-time or part-time roles in on-site, hybrid, or remote setups.I am a Full-Stack Web Developer with 9+ years of experience building, scaling, and optimizing production platforms. I specialize in the JavaScript/TypeScript ecosystem (React, Node.js, MERN/PERN), and I've shipped everything from real-time dashboards handling 60K+ concurrent users to a top-10 VS Code extension with over 630K installs and a companion npm package.I build resilient web architectures. I design high-performance React/TypeScript frontends and low-latency Node.js/NestJS backends, supported by scalable CI/CD pipelines using Docker and Kubernetes. Alongside my core full-stack skills, I have strong, practical experience integrating modern AI (OpenAI, Anthropic Claude) into complex platforms —such as building reliable decision pipelines for legal-tech and automated content scoring for news feeds with 60K+ DAU. Beyond coding, I am an experienced technical writer who has authored internal documentation and 12 technical articles that have reached 120K+ readers.I thrive on solving complex engineering challenges, optimizing databases, and delivering real impact to users. Let's connect! simin.shoaibi@proton.me https://github.com/SuisSanem000

Experience

Universitat Politècnica de Catalunya
Software Engineering Intern
October 2026 - Present (2 months)
Barcelona, Catalonia, Spain

Contributing to Jutge.org, an open-source automated grading platform for education at UPC (Facultat d'Informàtica de Barcelona - FIB), used across university courses and programming competitions.

Key focus areas:
• Working on jutge-toolkit (jtk), a modern command-line tool built with TypeScript and Bun for problem authoring and verification.
• Expanding JutgeAI capabilities to automate problem creation, edge-case test case generation, and multi-language LaTeX translations.
• Implementing closed-loop validation workflows to automatically compile, test, and self-correct generated code before publication.
• Mentored by Prof. Jordi Petit, Prof. Salvador Roura, and Prof. Jordi Cortadella.

TreeScribe / QueryLaw
Full-Stack Web Developer and AI systems engineer
January 2025 - June 2026 (1 year 6 months)
Australia

- Engineered the full-stack architecture for a next-generation legal-tech platform, designing modern React/TypeScript interfaces for complex legal workflows and expert-AI interactions.

- Modeled complex statutes and case law into machine-readable decision graphs with provenance and audit trails, while building backend telemetry for real-time monitoring and failure reproduction.

- Built a robust AI integration layer for legal reasoning, driving **95%+ accuracy** through advanced prompt engineering, dynamic context windows, and structured output parsing validated via multi-layer AJV schemas.

- Developed human-centered tooling for traceable reviews and side-by-side comparisons, collaborating with legal specialists to ensure interpretable and reliable outputs across European jurisdictions.

Dadroit
8 years

Technical Writer (Concurrent Role)
January 2022 - December 2024 (3 years)
Netherlands

- Authored comprehensive internal documentation for software architectures, APIs, and team workflows to streamline developer onboarding and knowledge sharing.

- Wrote and published 12 highly successful technical articles focusing on software development and tooling, reaching an audience of over 120K+ developers.

- Drove a 540% increase in organic user growth and visibility for developer tools (including the JSON Viewer and VS Code extensions) through strategic SEO and content marketing.

Full-Stack Web Developer
January 2019 - December 2024 (6 years)
Netherlands

- Led full-stack architecture for PERN-based platforms serving **60K+ concurrent users**, building real-time dashboards with React, TypeScript, and Socket.IO.

- Optimized high-load RESTful and GraphQL APIs, achieving a **35-40% latency reduction** and 99.9% uptime via strategic indexing and schema design in PostgreSQL and MongoDB.

- Created and launched a **top-10 VS Code extension (630K+ installs)** and drove 540% organic growth for a JSON Viewer product through SEO and 12 authored technical articles reaching 120K+ readers.

- Developed a semantic news feed platform by integrating **OpenAI LLMs** for content scoring, summarization, and personalization, automating curation for 60K+ daily active users.

- Established scalable CI/CD pipelines (Docker, Kubernetes, GitHub Actions), reducing deployment bugs by 40%, while mentoring 4+ junior engineers to promote coding best practices.

Desktop Developer & Database Engineer
January 2017 - December 2018 (2 years)
Ahwaz, Khuzestan Province, Iran

Designed and built cross-platform desktop applications (Windows, macOS, Linux) using Delphi, Free Pascal, and DevExpress for medical, financial, and fleet management operations.
Developed a high-performance JSON viewer that handles multi-GB datasets with custom tree views, syntax highlighting, and fast search; adopted by 60K+ users worldwide.

Engineered an internal 2D vector and typography rendering engine using Skia and Free Pascal.
Implemented relational schema architectures and backend automation using SQL Server, MySQL, and PostgreSQL, including real-time GPS tracking feeds and automated transaction/reconciliation suites.
Applied strict OOP and SOLID design principles to ensure responsive UI performance under resource-constrained environments.

Education

Universitat Politècnica de Catalunya
Master of innovation and research in informatics MIRI · (September 2026)

Islamic Azad University
Master of Engineering - MEng, Computer Software Engineering · (January 2018 - December 2020)

Shahid Chamran University of Ahvaz (Jundi Shapur)
Bachelor's degree, Computer Software Engineering · (January 2012 - December 2016)
